

Leg Swelling

Why us?

As with all ultrasounds, the quality of venous ultrasound can depend on the technician's experience.

Canadian Vascular Laboratories is the largest provider of vascular ultrasound in York Region.

Our sonographers have the experience of performing these studies daily, not weekly or monthly, as many other facilities may.

We provide consultation services if needed

Our Venous Doppler of the Legs can identify other causes for leg swelling besides Deep Vein Thrombosis

- Venous insufficiency is a frequent unrecognized cause of leg swelling. We use a detailed validated protocol.
- Pelvic masses can compress the iliac veins and can be identified indirectly on venous doppler of the legs.
- The venous Doppler can indirectly identify several cardiac disorders that can lead to leg swelling.
- Common non-vascular causes such as ruptured Baker's cysts are routinely searched.

We assess these conditions and more to arrive at a comprehensive diagnosis.

"Dr Gupta and members of the Canadian Vascular Laboratories should be commended for their contribution to the high quality and standards of the facility. The laboratory provides the community with an exceptional level of care."
