

## WE DO MORE THAN DVT TESTS

**Aortic and other aneurysms** need to be followed for growth. We monitor over 1,000 patients.

**Vasospasm from Raynauds** can be confirmed by assessing digital perfusion before and after cold challenge.

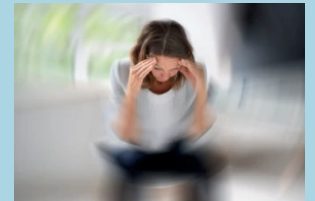

**Leg swelling** can arise from venous reflux (insufficiency). We use a validated protocol to assess for this.

**Diabetes** is the most common predisposing cause for amputation in Canada. Most are preceded by a **foot ulcer**. We provide a validated assessment of risk for diabetic foot ulceration.

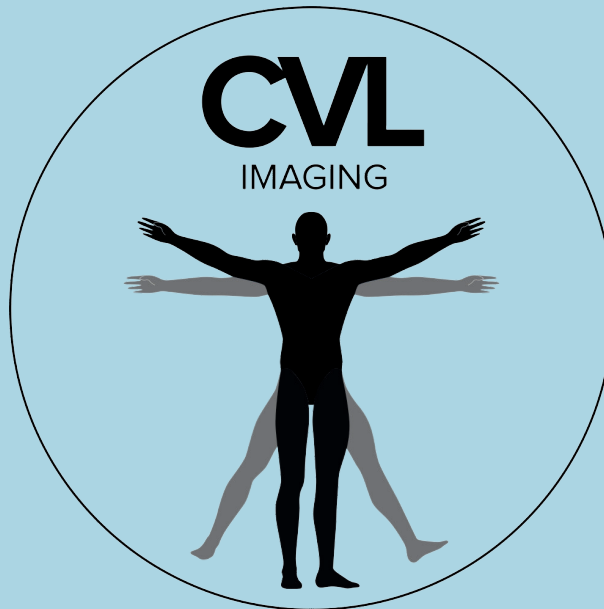

**Headache** from Temporal arteritis.

**Syncope or dizziness** can arise from vertebral artery compression. We can assess for dynamic obstruction of the vertebral artery with head movement.

**Numbness or discolouration of the foot or hand** can arise from impaired digital perfusion. We can assess for perfusion to each individual digit.

*"Dr Gupta and members of the Canadian Vascular Laboratories should be commended for their contribution to the high quality and standards of the facility. The laboratory provides the community with an exceptional level of care."*
