

Varicose veins

Why us?

As with all ultrasounds, the quality of venous ultrasound can depend on the technician's experience.

Canadian Vascular Laboratories is the largest provider of vascular ultrasound in York Region.

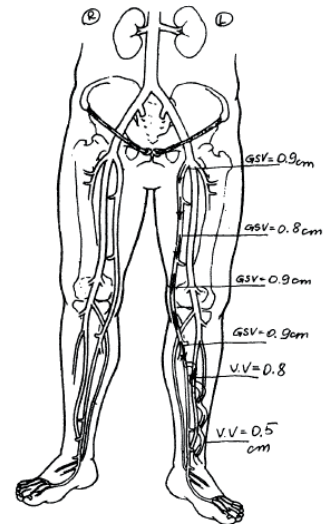

Our sonographers have the experience of performing these studies daily, not weekly or monthly, as many other facilities may.

We provide consultation services if needed.

- The key to treating varicose veins and their complications is determining whether there is saphenous vein incompetence.
- Treatment of saphenous vein incompetence controls symptoms, reduces complications, and reduces recurrence of varicose veins.
- Saphenous vein incompetence is found on a venous ultrasound.
- Most facilities do not assess for saphenous vein incompetence. They assess for deep vein thrombosis only. Even when specifically requested, saphenous vein incompetence is assessed poorly.
- Canadian Vascular Laboratories use a validated protocol to assess for saphenous vein incompetence.

A lot of our reports come with explanatory drawings which are very useful for doctors and patients.

EXAMPLE:

"Dr Gupta and members of the Canadian Vascular Laboratories should be commended for their contribution to the high quality and standards of the facility. The laboratory provides the community with an exceptional level of care."
