

Hand and Foot Discoloration

More Than Raynauds

Often Physical examination is not enough

Canadian Vascular Labs can differentiate between different types of hand and foot discoloration

This can include:

- Discoloration despite normal digital perfusion (e.g. neurogenic, metabolic)
- Discoloration from digital vasospasm at Room Temperature
- Discoloration from Raynaud's ... cold induced vasospasm
- Discoloration from small vessel digital arterial occlusion (e.g. autoimmune conditions, frostbite, and thrombophilia, atheroemboli)

"Dr Gupta and members of the Canadian Vascular Laboratories should be commended for their contribution to the high quality and standards of the facility. The laboratory provides the community with an exceptional level of care."

College of Physicians and Surgeons of Ontario 2020

Why us?

As with all ultrasounds, the quality of vascular ultrasound can depend on the technician's experience.

Canadian Vascular Laboratories is the largest provider of vascular ultrasound in York Region.

We provide consultation services if needed.
